Get the latest insights on storage networking. Follow Cisco storage Networking for insights and analysis on industry trends, product and solution innovations, customer success, events, and more. Read more

### **Storage Networking - Cisco**

A storage area network (SAN) is a dedicated high-speed network or subnetwork that interconnects and presents shared pools of storage devices to multiple servers. A SAN moves storage resources off the common user network and reorganizes them into an independent, high-performance network.

### **What is storage area network (SAN)? - Definition from ...**

A storage area network (SAN) or storage network is a Computer network which provides access to consolidated, block-level data storage. SANs are primarily used to enhance accessibility of storage devices, such as disk arrays and tape libraries, to servers so that the devices appear to the operating system as locally-attached devices.

### **Storage area network - Wikipedia**

HPE StoreFabric converged transceivers offer innovative and wire-once transceiver simplicity for storage networking and storage interfaces. Eliminate the guesswork of which transceiver to use with a single converged transceiver for LAN and SAN traffic supporting 10GbE, FCoE, iSCSI and 16 Gb FC.
